Namespace LlamaLogic.Packages

Classes

ArrayBufferWriterOfByteStream

Represents a write-only Stream that collects what is written to it in memory (🔓)

DataBasePackedFile

Represents a Maxis DBPF format package file (🔒)

ReadOnlyMemoryOfByteStream

Represents a read-only, seekable Stream over a ReadOnlyMemory<T> of bytes (🔓)

ResourceFileTypeAttribute

Specifies the file type of a package resource type independent of storage within a DataBasePackedFile

ResourceFileTypeFormatAttribute

Specifies the extension and mime type of a file type of a package resource independent of storage within a DataBasePackedFile

ResourceToolingMetadataAttribute

Specifies that the ResourceType is tooling metadata and not intended for use by the game

SmartSimUtilities

Provides utility methods specific to The Sims 4

Structs

ResourceKey

Represents the unique key of a resource within a DataBasePackedFile

Enums

CompressionMode

Represents the compression mode to use when setting the content of a resource in a DataBasePackedFile

ResourceFileType

The file type of a package resource independent of storage within a DataBasePackedFile

ResourceKeyOrder

Specifies the order in which a ResourceKey sequence should be processed

ResourceType

A type of resource within a DataBasePackedFile

Namespace LlamaLogic.TuningDescriptions

Classes

EnumTunableDescription

Represents the description of a tunable whose value is a member of an enumeration (a `TunableEnum` element) (🔒)

FragmentReferenceTunableDescription

Represents a reference to a shared description (a `TdescFragTag` element), whose Class names a TuningDescriptionFragment (🔒)

ListTunableDescription

Represents the description of a tunable that is a sequence of values described by Item (a `TunableList` element), including sets and mappings (🔒)

ScalarTunableDescription

Represents the description of a single-valued tunable (a `Tunable` element) (🔒)

TunableDescription

Represents the description of a tunable (🔒)

TuningDescriptionAction

Represents a change Maxis recorded in a document's version history, identifying tunables by their Muid (🔒)

TuningDescriptionClass

Represents a class described in a TuningDescriptionModule (a `Class` element): an enumeration, the holder of module tuning, or both (🔒)

TuningDescriptionDocument

Represents a document of a TuningDescriptionSet: an instance, a module, or a fragment (🔒)

TuningDescriptionEnumItem

Represents a member of an enumeration described by a TuningDescriptionClass (an `EnumItem` element) (🔒)

TuningDescriptionFragment

Represents a description shared by the FragmentReferenceTunableDescriptions that name it (a `TdescFrag` element), such as `TunableTestSet` (🔒)

TuningDescriptionInstance

Represents the description of a class of instance tuning (an `Instance` element), such as `Buff` (🔒)

TuningDescriptionModule
: Represents the description of a Python module's tuning and enumerations (a `Module` element), such as `sims.sim_info_types` (🔒)

TuningDescriptionSet
: Represents a set of tuning descriptions for a version of The Sims 4, as Maxis distributes it (🔒)

TupleTunableDescription
: Represents the description of a tunable composed of named tunables (a `TunableTuple` element) (🔒)

UnknownTunableDescription
: Represents a description in an element this library does not recognize, kept so that nothing in a document is lost (🔒)

VariantTunableDescription
: Represents the description of a tunable whose value is one of several named options (a `TunableVariant` element) (🔒)

Enums

TuningDescriptionActionType
: The type of a TuningDescriptionAction

TuningDescriptionExportModes
: The destinations to which the game's build exports a tunable (its `export_modes` attribute)

Namespace LlamaLogic.ValveDataFormat

Classes

VdfKeyValuePair

Represents a key-value pair in a VDF document

VdfNode

Represents a node in a VDF document

VdfSection

Represents a section in a VDF document
